

Tim Stonor

Tim Stonor is the Managing Director of **Space Syntax**, a firm of architects and planners that are specialists in the scientific analysis of pedestrian behaviour. Their work looks at movement at every scale of the city, forecasting where people will walk, cycle, drive or be driven, should a change in the street pattern or built environment be altered. They have had a hand in the redevelopment of public realm in many traditional cities, not least in London's prime public squares, but they have also developed forecasting techniques to predict movement patterns in future cities.

Our discussion ranges widely, considering how we get around now and how digital technologies will alter the way we will navigate the cities of the future. The interview was recorded in St Andrew's Gardens in Bloomsbury, just a short walk from Space Syntax's offices.

Notes from the podcast interview by Andrew Stuck: Recorded in June 2013 in St Andrew's Gardens, Bloomsbury, London and published in July 2013 on <http://talkingwalking.net>
